

Description:

3P Rainwater Tank in natural stone character.

This rain barrel with a capacity of 500l impresses with its lifelike reproduction of a natural stone wall.

The deep gaps and the natural shadings of stone are providing an interesting light and shadow play.

The rainwater tank is available in granite and sandstone.

It is completely made of Polyethylene.

One characteristic of this wall tank is its cover. The middle covering stone can be removed for cleaning.

The inlet has to be made laterally from the top edge.

The water can be removed through an opening in the front side. The filling of a watering can is possible.

There are further connection possibilities on the right and left side at the bottom where you can empty the barrel for the winter season.

The openings are closed with turnable plugs.

How it works:

1. Water is supplied through a 3P downpipe filter, e. g. the 3P Filter Collector, in the upper zone of the rainwater barrel.
2. The water in the barrel can be stored there for several weeks.
3. The water can be removed through the middle connection 3/4" internal thread through a tap.

The wall of the barrel is UV-resistant.

4. There is a screw thread 3/4" on each side of the barrel with which you can connect a pump or two barrels with each other. (battery circuit possible).
5. The middle element of the cover can be removed for cleaning.

Technical Data:

Dimensions:
Height: 200 cm
Width: 82 cm
Depth: 40 cm

Capacity: 500 Liter

Weight: 46 kg

Material: Polyethylene

Included in delivery:

- 1 Wall fastening bracket of stainless steel

Packing unit:

Pallet: 3 pcs.

EAN:

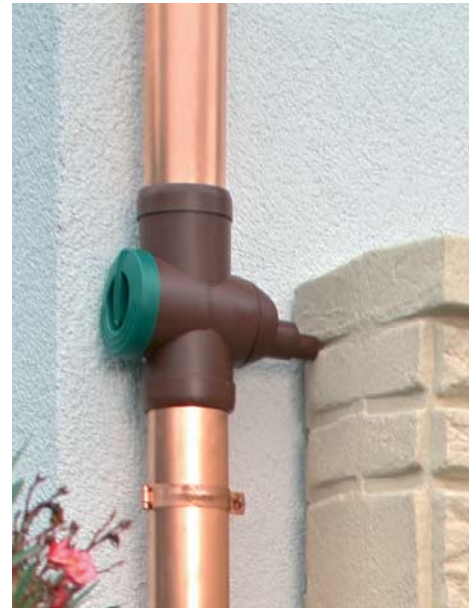

4018712000924 sandstone 9000325
4018712000948 granite 9000320

Accessories:

With the aid of the hole saw a connection for the water inlet can be made on any position. A grommet is also included for the connection of the 3P Filter Collector which we recommend as pre-filter. For the grommet DN50 you choose a diameter of 58 mm for the hole saw, a diameter of 45 mm for the 32 tube and the included grommet. For the connection of the 3P Connection Sets there are more diameters available.

Hole Saw:

Accessory 1:

3P Removal Set with transparent PVC-hose
 Art.-Nr. 9000278
 2m PVC-hose with check valve and connection piece with 3/4" external screw thread and fixation clip.

Accessory 2:

3P Connection Set 3/4"
 Art.-No. 9000326
 for the connection of two tanks with each other. Connection pieces with 3/4" external screw thread and flat sealing. 25 cm connection tube Ø 25 mm.

Accessory 3:

3P Filter Collector brown or grey
 Art.-No. 2000810 and 2000820
 Filters and collects rainwater. Ideal for filling aboveground rainwater butts. Suits with downpipes Ø 65 - 110 mm.
